VINNO S300

Powered by the advanced VLucid+ platform, the all-new S300 provides efficient and precise imaging with an intuitive interface, designed to meet the diverse demands of modern clinical practice, providing compact solution for efficient, everyday Imaging.

- 🔍 Outstanding Imaging Clarity
- 🔄 Broad Application Flexibility
- 📄 Streamlined Workflow Efficiency
- 👤 User-Friendly Design
- 🔋 Battery Support

Designed for Confident Imaging Performance

Powered by VLucid+ platform, with optimized imaging resolution and penetration, color flow sensitivity, S300 ensures precise results across a variety of clinical settings. Whether for routine scans or complex cases, the S300 provides the clarity and performance necessary to support confident decision-making.

Supported Transducers Family

- XCen technology with wider bandwidth for optimum scanning solution
- PureWave Single Crystal transducer offers better penetration and higher resolution

*More probes are available for multi-applications.

General Imaging Solutions

VAid Thyroid

Intelligent Evaluation and Staging of Thyroid Diseases

Thyroid nodules are detected in real-time or on stored images, alongside with T-RADS categorization and reporting tool, making clinical routine of thyroid ultrasound more accurate and productive.

Scan for Quick Guide

VFlow

A directional technology helps to detect low velocity blood flow. It enables accurate diagnosis when the blood flow examination is especially difficult.

VLuminous Flow

An innovative technology which enhances blood flow visualization by displaying 3D impression of Color/Power flow imaging.

Elastic Imaging

A semi-quantitative tool measures the relative stiffness between lesion and reference, to help detect early signs of some forms of cancer, monitor patients with liver conditions and locate the targets for biopsies.

Needle Enhancement

Allowing a straightforward needle approach with enhanced needle visualization to target and improve accuracy for needle procedures.

Women and Neonates' Health

VAid Breast
Intelligent Evaluation and Staging of Breast Diseases

Automatic breast screening and lesion detection in real-time or stored images, along with the smart BI-RADS analysis, effectively improves quality control.

Scan for Quick Guide

VAim Follicle

VAim Hip

VAim OB

VAim Pelvic

Color 3D

Color 3D applies advanced acquisition and rendering technology to provide improved visualization and structure expression helps users better understand natural hemodynamics of vascular networks like umbilical cord and fetal heart.

Umbilical Cord

Cardiovascular Solutions

Auto EF

One-click to calculate the Ejection Fraction (EF).

Strain Imaging

Apical 4 Chamber view showing segmental and global longitudinal strain of left ventricle.

Live IMT

Real time and auto measurement of both anterior and posterior wall.

VCQ

Designed for primary and clinical doctors, the adult cardiac quantitative analysis tool helps to quickly assess 2D cardiac measurements.

User-Friendly Design

21.5" High-resolution monitor

Gel warmer

13.3" Tiltable touch screen

Built-in battery for up to 6-hour scanning

Height and direction adjustable console

3 or 4 Transducer ports

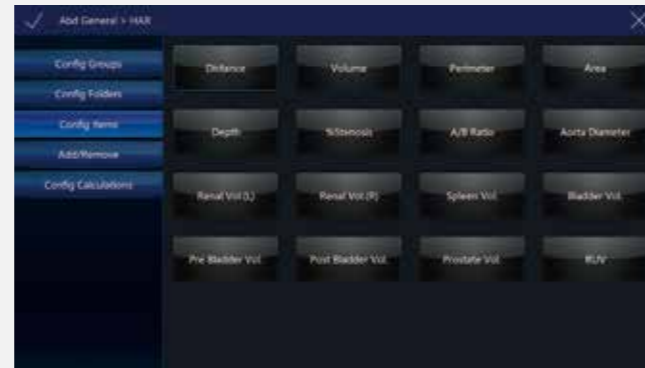

Streamlined Workflow Efficiency

Smart touch panel operation and self-defined exam protocol makes your daily work high efficient.

Self-defined preset

Self-defined measurement items

Fast review by sliding on touch screen

Built-in report template

Tutorials

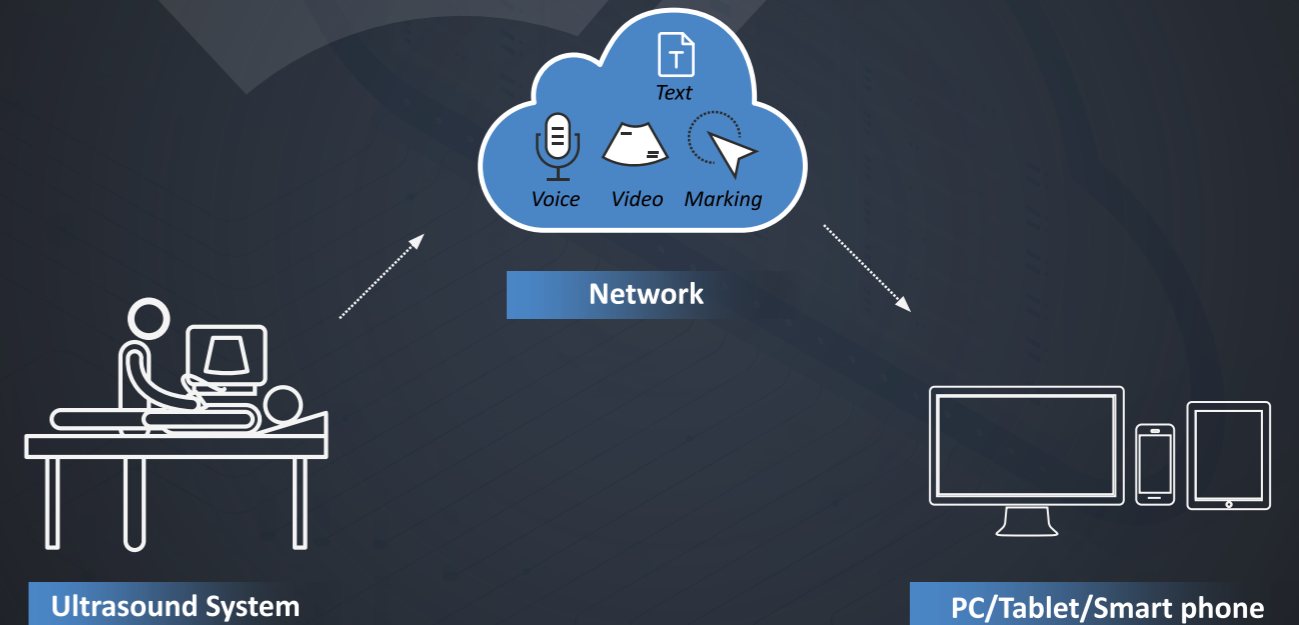

In-built with one of the most extensive tutorial module, with up to 68 anatomical parts, including shoulder, elbow, wrist and knee. With vivid scanning animation and real-time scanning plane, supplemented by basic clinical knowledge, VINNO's tutorials greatly increase the confidence in the initial learning process.

FLYINSONO

Connect anytime, from anywhere, at any terminal

Flyinsono is the pioneer of Remote Ultrasound Imaging Solution. Endorsed by Cloud technology, Flyinsono can realize Remote Consultation, Intelligent Diagnosis, Remote Quality Control, Online Training, Remote Service, Academic Seminars and etc. Flyinsono breaks down geographical, traffic and personnel barriers, and provides real-time or time-sharing services to remote medical facilities. Especially with the AI-based diagnostic tools, physicians can significantly improve their diagnostic efficiency and accuracy.
